

**BARJATYA
POLYCHEM**

An ISO 9001:2015 Certified

LEADING

**MANUFACTURERS OF
PLASTIC MASTER BATCHES
AND COMPOUNDS**

ABOUT US

We are pioneers in the manufacturing of polymer compounds and masterbatches in North India, especially for the footwear industry. We provide customized products and services to the plastic processing industry across Eastern India.

Our modern master batch & compounding plant at Jhotwara, Jaipur has production infrastructure of Masterbatches and compound with a capacity of 1800 MT/annum. This plant is equipped with the latest machineries, quality assessment techniques and R&D laboratories.

INFRASTRUCTURE

Our production unit at Jhotwara, Jaipur is spread over 45000 sq. ft area

One state-of-the-art Twin-Screw Extruders for Masterbatches

Four PVC Compounding Lines

Two Kneader Extrude Compounding Lines

One isolated Black Masterbatch Line.

Our R& D Lab for quality control is equipped with :

- ☉ Spectra Photometer
- ☉ MFI Testing Machine
- ☉ Muffle Furnace
- ☉ Hydraulic Press
- ☉ Two Roll Mill Machine
- ☉ Melting Point Apparatus
- ☉ Pilot Plant for Injection Moulding & Blown Film
- ☉ Gelimat type Colour MB Development Machine

SERVICES

Colour Matching & Development - Colour matching is a combination of art and science BP team of experts and engineers from R&D co-ordinate with technical support team to understand the customer's process and application, based on which we select the combination of polymer, additives and pigments to fit the customer's requirement at competitive prices.

Technical Support - BP Technical support team consists of experts and trained engineers in various fields of applications. Technical support team visits customers in frequent intervals to understand the changing needs of the customer and liaison with the R&D team to develop and customize new products as per the customer's requirement.

Timely Response - BP team of experts and experienced engineers ensure a quick turnaround time for new colour matching as well as compound development in compliance with all the testing standards required by the customer. The turnaround time is monitored by the top management to ensure customer satisfaction.

**SPECIAL EFFECT
MASTERBATCHES**

VISION

To be a leader in the field of Master Batch and compounds through continuous growth in our product and services by adopting latest technologies and innovations and ensuring our customers become our partners in growth.

MISSION

To serve our customers with best quality products and services at competitive price every time and maintaining a healthy business relationship with all our stakeholders. For our employees, we aim to provide a positive working atmosphere and growth opportunities along with training a positive skill development. We assure to have sustainable growth by adopting environment friendly manufacturing techniques.

FEATURES

RESEARCH & DEVELOPMENT - BP accuracy and pilot plants to test and analyze the samples and products to ensure that it's a perfect match for our customers. R&D Team stays updated with the ever-changing trends of the market as well as customer demands. R&D laboratory is equipped with Spectrophotometer, Two Roll Mill, Lab Twin Screw Extruder, Injection Moulding Plant, Blown Film Plant, MFI, Muffle Furnace to name a few.

QUALITY CONTROL - BP is committed towards providing excellent quality products and services to its esteemed customers. Rigorous testing of incoming raw materials and stringent approval processes ensure the consistency of raw materials used in the manufacturing process. Various quality plans such as In-line-Testing and pre dispatch verifications ensure that the customer gets right product every time.

PRODUCTS

Black Masterbatch - BP Black masterbatches are available as universal and customized grades to serve most of the application in plastics processing industry. They have excellent dispersion, maximum jetness & optimum opacity.

White Masterbatch - BP White masterbatches are available in wide range of varieties based on Titanium Di-oxide loading and base polymer combination. Universal and customized grades serve most of the application in plastics processing industry. They have excellent dispersion, maximum whiteness with optimum opacity.

Colour Masterbatch - BP Colour masterbatches come with over two hundred shades of shades of colours from our database as well as international references such as Pantone Database. Our colour matching laboratory gives shape to the colour concepts of our customers. We offer colour masterbatches customized to the base polymer as well universal masterbatches which caters to a wide range of applications.

Additive Masterbatch - BP Additive masterbatches such as UV, Anti-Static, Slip, Anti-Slip, Anti-Block, Nucleating, Process-aid, Optical Brightener, Flame Retardant come with various base polymers, which can be used in woven sacks, injection moulding, film and sheet extrusion, pipe, roto-moulding, green house, geo-textile and canal lining applications.

Special Effects Masterbatch - BP Special Effects masterbatches provide metallic, pearl as well as fluorescent effects to plastic products. This is available in various shades in our database and can also be customized as per the customer's requirement with reference to pantone shades.

**SPECIAL EFFECT
MASTERBATCHES**

**BARJATYA
POLYCHEM**

Colour Masterbatch

BARJATYA POLYCHEM Manufacture wide range of Standard Colour Masterbatches with an active colour database of over 1500 shades for all major processing methods, compatible with polyolefin's. We can produce tailor made masterbatches as per the customer's requirements. We have various colour shades suitable for different applications like thin multilayer blown film, Non-woven, Fiber, Injection moulding, Blow Moulded Item etc.

Our Colour Masterbatches have excellent dispersion, Better UV, Light fastner & weather resistant properties, high brightness and opacity, low LDR with good heat resistant & light fastness, BP also have suitable colour masterbatches for food contact complaint adhering National Regulations.

Besides our databank and colours, we can match a colour according to your physical sample, LAB values or even a pantone or RAL shade card number. Our team of colour technicians can practically match any colour that you can dream of.

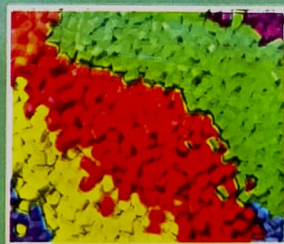

Colour Masterbatches Product Range:-

*Aesthetic solid shade
& pastel colours*

Pearlscent

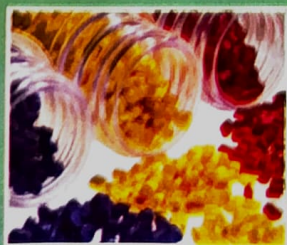

Fluroscent

Metallic

Marble Effect

Transparent

*Phosphorescent
Nigh Glow*

Thermochromic

Titanium loading	Base carrier	Application
75%	PE	Multilayer, Monolayer film, injection, Blow Molding, Lamination etc.
60%	PE	Multilayer, Monolayer film Blow injection, Lamination Non Woven application etc.
50%	PE	Monolayer film, Blow Molding, Rotational Molding injection, Molding pipe Extrusion.
40%	PE	Monolayer Film, Blow Molding, Rotational Molding, Injection Molding pipe Extrusion.

White Masterbatch

There are made from high-quality Rutile fine Titanium Dioxide, chosen to provide high opacity with bright whiteness and

glossiness. They are widely used in masterbatch production as a white pigment, giving good coverage, brightness, and UV protection. We offer a full range of White Masterbatches, from regular grades to premium ones, containing 20% to 75% TiO₂ loading, to match different customer needs. Our Premium White Masterbatches are trusted by leading flexible packaging industries, where strong energy retention and be processed above 300°C for applications like extrusion coating without any problems such as formation of carbon in die, yellowness and necking.

Black Masterbatch

Carbon loading	Base carrier	Application
50%	PE	Raffia, pipes and Film Extrusion.
50%	PE	Rotomolded Tank Molding, HDPE pipes, extrusion, Injection, Blow Molding etc..
40%	PE	Economical grade for Injection molding and thick film.
40%	PE	For High jet & Gloss Film, UV Resistance, Geo Textiles
35%	PE	PP fibre grades for Multi filament and Mono Filament
30%	PE	General Purpose

There are made using better quality Carbon Black with better dispersion and better glossiness. We use only very fine and suitable grades of carbon black for making our masterbatch. Carbon black particles are round in shape, with sizes ranging from 5 to 80 nm, and surface areas from 20 to 120 m²/g. A larger surface area gives higher Jetness, Deep black, and Brown look and better UV protection.

Our Black Masterbatches are available in utility to premium grades, containing 20% to 55% Carbon Black. They are widely used in blown films, agricultural films, lamination, non-woven fabric, injection molding, blow molding, pipes, roto-molded tanks, and many offer application where a deep black finish, shine, and UV resistance are required.
